ABSENT

None

This adjourned regular meeting of the City Council was called for the purpose of receiving a report from Mr. Gail Lynch of John Carollo Engineers, whose firm is in the process of completing the plans and specifications for the reconstruction of the sewer treatment plant.

Mr. Lynch reports that recently completed percolation tests cause concern that the proposed percolation site of 40 acres may not be adequate to percolate all the effluent 100% of the time. Mr. Lynch explained possible problems in detail and Council discussed the matter at length.

The following alternative measures are recommended by John Carollo Engineers in order to insure that discharge requirements can be met at all times.

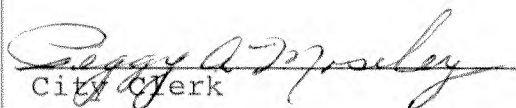

1. Do not provide a percolation area for disposal, and design for a complete river discharge. Provide additional tertiary treatment when, and as, required.
2. Construct the proposed percolation area, and purchase additional land on the bluff for additional percolation area. Land purchase would not be eligible for grant participation.
3. Construct the proposed percolation area, and provide pressure filtration, at this time, to insure that a river discharge could be met. Purchase and/or lease additional land, as funds become available, for a complete land disposal policy.

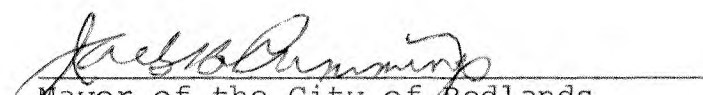

Following further elaboration by Mr. Lynch and Council discussion, Council concurred in the decision to authorize the procedure recommended in Alternate 2, with the request that Alternate 3 be bid in order to determine the cost of Alternate 3. This motion of Councilman Knudsen, seconded by Councilman Miller, was unanimously adopted.

There being no further discussion, the Council adjourned on motion.

Next regular meeting, July 18, 1972.

ATTEST:

 City Clerk

 Mayor of the City of Redlands
